

DISCLAIMER!

This information may not be accurate or current and is not valid for navigation or flight planning. No warranty of fitness for any purpose is made or implied!

The time/distance calculator has been designed to provide a rough estimation of the flight time/distance for a journey between two points (airports).

The calculator is based on the “Great circle” definition: The shortest distance between two points on the Earth. A circle defined by the intersection of the surface of the Earth and any plane that passes through the center of the Earth. Note: On the idealized surface of the Earth, the shortest distance between two points lies along a great circle. Pls, see fig.1

The actual flight usually follows a different path defined by the applicable air navigation regulations and aircraft performance specifics.

Avio Delta is not responsible for the accuracy of the provided here estimated time and distances. This information is only indicative and is not applicable to the actual quotations and flights.

The time/distance calculator does not take into consideration the actual possibility of executing a flight between any two airports subject to the applicable air navigation regulations, airport specifics and Avio Delta aircrafts' performance specifics.
